

<b>SDG Goal 3</b>	<b>Good health and well-being</b>
<b>SDG Target 3.6</b>	<b>By 2020, halve the number of global deaths and injuries from road traffic accidents</b>
<b>SDG Indicator 3.6.1</b>	<b>Death rate due to road traffic injuries</b>
<b>Time series</b>	<b>Mortality due to road traffic accidents</b>

### 1. General information on the time series

- Date of national metadata: 12 January 2022
- National data: <http://sdg-indikatoren.de/en/3-6-1/>
- Definition: The time series measures the number of deaths within 30 days of a road traffic accident, expressed per 100,000 inhabitants. The death must have been caused by the accident.
- Disaggregation: Not available.

### 2. Comparison with global metadata

- Date of global metadata: March 2021
- Global metadata: <https://unstats.un.org/sdgs/metadata/files/Metadata-03-06-01.pdf>
- The time series is compliant with the global metadata.

### 3. Data description

- The data on death due to road traffic accidents is taken from the statistics of road traffic accidents conducted by the Federal Statistical Office. The statistic is a complete sample and considers the road accidents caused by traffic on public roads and squares, which have been recorded by the police.

The population data comes from the intercensal population updates, the basis of which is the last census conducted in 2011. The population data is rolled forward using statistical results on natural population change (births, deaths) and migrations. For 2010, the population was calculated backwards using the 2011 census and migration, birth and death statistics.

### 4. Accessibility of source data

- Road traffic accidents: registered by the police: specification:

## 6. Timeliness and frequency

- Timeliness: t + 7 months
- Frequency: Annual

## 7. Calculation method

- Unit of measurement: Per 100,000 inhabitants
- Calculation method:

$$\text{Fatalities due to road traffic accidents} = \frac{\text{Deaths due to road traffic accidents [number]}}{\text{Population [number]}} \cdot 100,000$$
