

SDG Goal 10 Reduced inequalities

SDG Target 10.5 Improve the regulation and monitoring of global financial markets and institutions and strengthen the implementation of such regulations

SDG Indicator 10.5.1 Financial Soundness Indicators

Time series (1) Tier-1 capital to assets

1. General information on the time series

- Date of national metadata: January 22, 2026
- National data: <https://sdg-indicators.de/10-5-1>
- Definition: The time series shows the ratio of core capital (Tier 1) to total assets. In countries that have adopted the Basel III leverage ratio, this indicator is calculated using regulatory Tier 1 capital as the numerator and the risk position as the denominator. The latter comprises balance sheet assets, derivative positions, risks arising from securities financing transactions and off-balance-sheet items.
- Disaggregation: Not available.

2. Comparability with the UN metadata

- Date of UN metadata: September 2024
- UN metadata: <https://unstats.un.org/sdgs/metadata/files/Metadata-10-05-01.pdf>
- The time series is compliant with the UN metadata.

3. Data description

- The data is sourced from the Deutsche Bundesbank (Bundesbank Indicator I001) and is based on the Financial Soundness Indicators (FSI) developed by the International Monetary Fund (IMF). The FSIs are used to assess the stability of the financial system and include key figures on banks, other financial institutions, companies, private households and property markets.

Methodological changes and breaks in time series

In 2019, the IMF published the Financial Soundness Indicators Compilation Guide 2019, which contained revised definitions and methods for the FSIs. In 2022, the IMF's FSI database was updated to reflect this methodology; as a result, methodological breaks in time series may occur.

4. Access to data source

- FSI – Special series regarding SDDS+:
https://www.bundesbank.de/dynamic/action/en/statistics/time-series-data-bases/time-series-databases/759784/759784?listId=www_sfsi_sddsplusfsi

5. Metadata on source data

- Financial Soundness Indicators (FSI):
<https://www.bundesbank.de/en/statistics/sets-of-indicators/financial-soundness-indicators>

- Methodological notes of the indicators:
<https://www.bundesbank.de/en/statistics/sets-of-indicators/financial-soundness-indicators/methodological-notes-795772>

6. Timeliness and frequency

- Timeliness: Not available.
- Frequency: Annual

7. Calculation method

- Unit of measurement:
- Calculation:

$$\text{Tier-1-capital to assets} = \frac{\text{Regulatory Tier-1-capital [Mn EUR]}}{\text{Risks positions [Mn EUR]}} \cdot 100 [\%]$$

SDG Goal 10 Reduced inequalities

SDG Target 10.5 Improve the regulation and monitoring of global financial markets and institutions and strengthen the implementation of such regulations

SDG Indicator 10.5.1 Financial Soundness Indicators

Time series (2) Regulatory Tier 1 capital to risk-weighted assets

1. General information on the time series

- Date of national metadata: January 22, 2026
- National data: <https://sdg-indicators.de/10-5-1>
- Definition: The time series shows the regulatory Tier 1 capital to risk-weighted assets. This indicator measures the ratio of regulatory core (tier 1) capital to all weighted risk positions pursuant to the Solvency Regulation (by the end of 2006: Principle I). It is calculated using single-institution data and, from 2008 on, consolidated reports of waiver-groups from credit institutions subject to reporting requirements pursuant to sections 10 and 10a of the German Banking Act, whereby the regulatory tier 1 capital is set in relation to the sum of the respective weighted risk positions. Deviations from the IMF methodology arise with regard to the national definition of risk weights (by end of 2006 of Tier 1 capital) as well as the basis of consolidation, which covers the institution as a whole (including foreign branches) but, on a non-consolidated basis, excludes foreign subsidiaries.

(The weighted risk positions are the risk-weighted assets and the market price risks to be taken into account pursuant to the Solvency Regulation (by the end of 2006 pursuant to Principle I).

- Disaggregation: Not available.

2. Comparability with the UN metadata

- Date of UN metadata: September 2024
- UN metadata: <https://unstats.un.org/sdgs/metadata/files/Metadata-10-05-01.pdf>
- The time series is compliant with the UN metadata.

3. Data description

- The data is sourced from the Deutsche Bundesbank (Bundesbank Indicator I002) and is based on the Financial Soundness Indicators (FSI) developed by the International Monetary Fund (IMF). The FSIs are used to assess the stability of the financial system and include key figures on banks, other financial institutions, companies, private households and property markets.

Methodological changes and breaks in time series

In 2019, the IMF published the Financial Soundness Indicators Compilation Guide 2019, which contained revised definitions and methods for the FSIs. In 2022, the IMF's FSI database was updated to reflect this methodology; as a result, methodological breaks in time series may occur.

4. Access to data source

- Methodological notes of the indicators:
<https://www.bundesbank.de/en/statistics/sets-of-indicators/financial-soundness-indicators/methodological-notes-795772>

6. Timeliness and frequency

- Timeliness: Not available.
- Frequency: Annual

7. Calculation method

- Unit of measurement:
- Calculation:

$$\begin{array}{l}
 \text{Regulatory} \\
 \text{(Tier 1) capital to risk-} \\
 \text{weighted assets}
 \end{array}
 = \frac{
 \begin{array}{l}
 \text{Regulatory} \\
 \text{capital (tier 1) [Mn EUR]}
 \end{array}
 }{
 \begin{array}{l}
 \text{All weighted} \\
 \text{risk positions [Mn EUR]}
 \end{array}
 } \cdot 100 [\%]$$

SDG Goal 10 Reduced inequalities

SDG Target 10.5 Improve the regulation and monitoring of global financial markets and institutions and strengthen the implementation of such regulations

SDG Indicator 10.5.1 Financial Soundness Indicators

Time series (3) Non-performing loans net of provisions to capital

1. General information on the time series

- Date of national metadata: January 22, 2026
- National data: <https://sdg-indicators.de/10-5-1>
- Definition: As there is no definition of "non-performing loans" (NPL) in Germany, the IMF uses the risk classification of loans pursuant to the Auditor's Report Regulation (Prüfungsberichtsverordnung). Up until the end of 2008, the indicator was calculated by setting loans requiring individual value adjustments on a net basis (less risk provisions) in relation to the institutions' balance sheet capital. The following were included: customer loans (accounts receivable and bill-based loans pursuant to section 15 of the Regulation on the Accounting of Banks and Financial Services Institutions (Verordnung über die Rechnungslegung der Kreditinstitute und Finanzdienstleistungsinstitute) as well as liability loans pursuant to section 26 of the Regulation on the Accounting of Banks and Financial Services Institutions) requiring individual value adjustments after deducting value adjustments.

Since the Auditor's Report Regulation was amended in 2009, NPL also include overdue loans for which no individual value adjustments need be made yet. Moreover, the definition of loans as well as risk provisions has, since the amendment of the Auditor's Report Regulation, been based on the extended definition of exposures and loans pursuant to the prudential definition in section 19 of the German Banking Act (Kreditwesengesetz). The extended definition of exposures and loans now also includes securities, participating interests and off-balance sheet transactions. Risk provisions also include those for interbank loans. Other deviations from the IMF methodology can be attributed to national accounting regulations and the consolidated group, which comprises the overall institution (incl foreign branches) but not foreign subsidiaries.

- Disaggregation: Not available.

2. Comparability with the UN metadata

- Date of UN metadata: September 2024
- UN metadata: <https://unstats.un.org/sdgs/metadata/files/Metadata-10-05-01.pdf>
- The time series is compliant with the UN metadata.

3. Data description

- The data is sourced from the Deutsche Bundesbank (Bundesbank Indicator I003) and is based on the Financial Soundness Indicators (FSI) developed by the International Monetary Fund (IMF). The FSIs are used to assess the stability of the financial system

and include key figures on banks, other financial institutions, companies, private households and property markets.

Methodological changes and breaks in time series

In 2019, the IMF published the Financial Soundness Indicators Compilation Guide 2019, which contained revised definitions and methods for the FSIs. In 2022, the IMF's FSI database was updated to reflect this methodology; as a result, methodological breaks in time series may occur.

4. Access to data source

- FSI – Special series regarding SDDS+:
https://www.bundesbank.de/dynamic/action/en/statistics/time-series-data-bases/time-series-databases/759784/759784?listId=www_sfsi_sddsplusfsi

5. Metadata on source data

- Financial Soundness Indicators (FSI):
<https://www.bundesbank.de/en/statistics/sets-of-indicators/financial-soundness-indicators>
- Methodological notes of the indicators:
<https://www.bundesbank.de/en/statistics/sets-of-indicators/financial-soundness-indicators/methodological-notes-795772>

6. Timeliness and frequency

- Timeliness: Not available.
- Frequency: Annual

7. Calculation method

- Unit of measurement:
- Calculation:

$$\begin{array}{c} \text{Non-performing} \\ \text{loans net of provisions} \\ \text{to capital} \end{array} = \frac{\begin{array}{c} \text{Non-performing loans} \\ \text{(net of risk provisions) [Mn EUR]} \end{array}}{\begin{array}{c} \text{Balance} \\ \text{sheet capital [Mn EUR]} \end{array}} \cdot 100 [\%]$$

SDG Goal 10 Reduced inequalities

SDG Target 10.5 Improve the regulation and monitoring of global financial markets and institutions and strengthen the implementation of such regulations

SDG Indicator 10.5.1 Financial Soundness Indicators

Time series (4) Non-performing loans to total gross loans

1. General information on the time series

- Date of national metadata: January 22, 2026
- National data: <https://sdg-indicators.de/10-5-1>
- Definition: Up to and including 2008, the time series showed customer loans requiring individual value adjustments in relation to the institutions' total gross customer loans. It was determined by setting non-performing loans – which, according to the national definition, were calculated on the basis of customer loans requiring individual value adjustments (accounts receivable and bill-based loans pursuant to section 15 of the Regulation on the Accounting of Banks and Financial Services Institutions as well as liability loans pursuant to section 26 of the Regulation on the Accounting of Banks and Financial Services Institutions) – in relation to the total customer credit volume.

Since the Auditor's Report Regulation was amended in 2009, the definition of NPL also includes overdue loans (excl individual value adjustments made). In addition, the definition of customer credit volume has, since the amendment of the Auditor's Report Regulation, been based on an extended definition of exposures and loans pursuant to the prudential definition in section 19 of the German Banking Act (incl securities, participating interests and off-balance sheet transactions) vis-à-vis non-banks. Claims against credit institutions are not included. Other deviations from the IMF methodology can be attributed to national accounting regulations and the consolidated group, which comprises the overall institution (incl foreign branches) but not foreign subsidiaries.

- Disaggregation: Not available.

2. Comparability with the UN metadata

- Date of UN metadata: September 2024
- UN metadata: <https://unstats.un.org/sdgs/metadata/files/Metadata-10-05-01.pdf>
- The time series is compliant with the UN metadata.

3. Data description

- The data is sourced from the Deutsche Bundesbank (Bundesbank Indicator I004) and is based on the Financial Soundness Indicators (FSI) developed by the International Monetary Fund (IMF). The FSIs are used to assess the stability of the financial system and include key figures on banks, other financial institutions, companies, private households and property markets.

Methodological changes and breaks in time series

In 2019, the IMF published the Financial Soundness Indicators Compilation Guide 2019, which contained revised definitions and methods for the FSIs. In 2022, the IMF's FSI database was updated to reflect this methodology; as a result, methodological breaks in time series may occur.

4. Access to data source

<https://www.bundesbank.de/en/statistics/sets-of-indicators/financial-soundness-indicators/methodological-notes-795772>

6. Timeliness and frequency

- Timeliness: Not available.
- Frequency: Annual

7. Calculation method

- Unit of measurement:
- Calculation:

$$\begin{array}{c} \square \end{array} \quad \text{Non-performing loans} \\
 \text{Non-performing loans} = \frac{\text{(net of provisions) [Mn EUR]}}{\text{Total gross loans [Mn EUR]}} \cdot 100 [\%] \\
 \text{to total gross loans}$$

SDG Goal 10 Reduced inequalities

SDG Target 10.5 Improve the regulation and monitoring of global financial markets and institutions and strengthen the implementation of such regulations

SDG Indicator 10.5.1 Financial Soundness Indicators

Time series (5) Return on assets

1. General information on the time series

- Date of national metadata: January 22, 2026
- National data: <https://sdg-indicators.de/10-5-1>
- Definition: The time series shows the return on assets. The total return on assets is used to assess profitability in relation to total capital within an accounting period for purposes of comparison. The indicator is calculated as the ratio of profit for the financial year before tax to the average balance sheet total of domestic MFIs. The profit for the financial year is based on a secondary statistical evaluation of the banks' profit and loss accounts (annual accounts data); the average balance sheet total is calculated on the basis of the banks' monthly balance sheet statistics. Deviations from the IMF methodology arise owing to the basis of consolidation, which covers the institution as a whole (including foreign branches) but excludes foreign subsidiaries.
- Disaggregation: Not available.

2. Comparability with the UN metadata

- Date of UN metadata: September 2024
- UN metadata: <https://unstats.un.org/sdgs/metadata/files/Metadata-10-05-01.pdf>
- The time series is compliant with the UN metadata.

3. Data description

- The data is sourced from the Deutsche Bundesbank (Bundesbank Indicator I006) and is based on the Financial Soundness Indicators (FSI) developed by the International Monetary Fund (IMF). The FSIs are used to assess the stability of the financial system and include key figures on banks, other financial institutions, companies, private households and property markets.

Methodological changes and breaks in time series

In 2019, the IMF published the Financial Soundness Indicators Compilation Guide 2019, which contained revised definitions and methods for the FSIs. In 2022, the IMF's FSI database was updated to reflect this methodology; as a result, methodological breaks in time series may occur.

4. Access to data source

- FSI – Special series regarding SDDS+:
https://www.bundesbank.de/dynamic/action/en/statistics/time-series-data-bases/time-series-databases/759784/759784?listId=www_sfsi_sddsplusfsi

6. Timeliness and frequency

- Timeliness: Not available.
- Frequency: Annual

7. Calculation method

- Unit of measurement:
- Calculation:

$$\text{Return on assets} = \frac{\text{Profit before tax [Mn EUR]}}{\text{Balance sheet total [Mn EUR]}} \cdot 100 [\%]$$

SDG Goal 10 Reduced inequalities

SDG Target 10.5 Improve the regulation and monitoring of global financial markets and institutions and strengthen the implementation of such regulations

SDG Indicator 10.5.1 Financial Soundness Indicators

Time series (6) Liquid assets to short-term liabilities

1. General information on the time series

- Date of national metadata: January 22, 2026
- National data: <https://sdg-indicators.de/10-5-1>
- Definition: The time series shows the liquid assets to short-term liabilities. This indicator is calculated by comparing the liquid assets with the institutions' short-term liabilities as prudentially defined: the reports of credit institutions subject to reporting requirements under the Liquidity Regulation (by the end of 2006: under Principle II) pursuant to section 11 of the German Banking Act are used as a basis for this. To this end, all liquid assets are set in relation to liabilities with a residual maturity of three months or less. Deviations from the IMF methodology arise owing to the basis of consolidation, which covers the institution as a whole (including foreign branches) but excludes foreign subsidiaries.
- Disaggregation: Not available.

2. Comparability with the UN metadata

- Date of UN metadata: September 2024
- UN metadata: <https://unstats.un.org/sdgs/metadata/files/Metadata-10-05-01.pdf>
- The time series is compliant with the UN metadata.

3. Data description

- The data is sourced from the Deutsche Bundesbank (Bundesbank Indicator I011) and is based on the Financial Soundness Indicators (FSI) developed by the International Monetary Fund (IMF). The FSIs are used to assess the stability of the financial system and include key figures on banks, other financial institutions, companies, private households and property markets.

Methodological changes and breaks in time series

In 2019, the IMF published the Financial Soundness Indicators Compilation Guide 2019, which contained revised definitions and methods for the FSIs. In 2022, the IMF's FSI database was updated to reflect this methodology; as a result, methodological breaks in time series may occur.

4. Access to data source

- FSI – Special series regarding SDDS+:

<https://www.bundesbank.de/en/statistics/sets-of-indicators/financial-soundness-indicators/methodological-notes-795772>

6. Timeliness and frequency

- Timeliness: Not available.
- Frequency: Annual

7. Calculation method

- Unit of measurement:
- Calculation:

$$\text{Liquid assets to short-term liabilities} = \frac{\text{Liquid assets [Mn EUR]}}{\text{Short-term liabilities [Mn EUR]}} \cdot 100 [\%]$$

SDG Goal 10 Reduced inequalities

SDG Target 10.5 Improve the regulation and monitoring of global financial markets and institutions and strengthen the implementation of such regulations

SDG Indicator 10.5.1 Financial Soundness Indicators

Time series (7) Net open position in foreign exchange to capital

1. General information on the time series

- Date of national metadata: January 22, 2026
- National data: <https://sdg-indicators.de/10-5-1>
- Definition: The time series shows the net open position in foreign exchange to capital. This indicator is calculated by measuring the ratio of prudentially defined open for-foreign exchange positions to the institutions' regulatory capital. The individual institutions' reports and, from 2008 on, consolidated reports of waiver-groups under the Solvency Regulation are used as a basis for this. The credit institutions' currency-related net overall position is set in relation to their regulatory capital. Deviations from the IMF methodology arise owing to limited institutional coverage with regard to the regulatory reporting obligations, the definition of regulatory capital, the identifiability of the net positions of risk models as well as the basis of consolidation, which covers the institution as a whole (including foreign branches) but, on a non-consolidated basis, excludes foreign subsidiaries.
- Disaggregation: Not available.

2. Comparability with the UN metadata

- Date of UN metadata: September 2024
- UN metadata: <https://unstats.un.org/sdgs/metadata/files/Metadata-10-05-01.pdf>
- The time series is compliant with the UN metadata.

3. Data description

- The data is drawn from the Financial Soundness Indicators (FSI) developed by the International Monetary Fund (IMF). The FSI are used to assess the stability of the financial system and include key figures on banks, other financial institutions, companies, private households and property markets.

The data underlying the FSIs is based exclusively on the European-harmonised Common Reporting (COREP) and Financial Reporting (FINREP) data. The European Banking Authority (EBA) has developed a mapping guide for this purpose, which describes the correspondence between the ITS reporting framework and the FSI indicators. Implementation takes place in accordance with the EBA's harmonised guidelines, even though this involves national data reporting to the IMF. Among other things, this serves to ensure a uniform approach and comparability between the Member States of the European Union.

4. Access to data source

- Databases for Financial Soundness Indicators (FSI):
[https://data.imf.org/en/Data-Explorer?datasetUrn=IMF.STA:FSIC\(13.0.1\)](https://data.imf.org/en/Data-Explorer?datasetUrn=IMF.STA:FSIC(13.0.1))
