

SDG Goal 3

Good health and well-being

SDG Target 3.1

By 2030, reduce the global maternal mortality ratio to less than 70 per 100,000 live births

SDG Indicator 3.1.2

Proportion of births attended by skilled health personnel

Time series

Births attended by skilled health personnel

1. General information on the time series

- Date of national metadata: May 20, 2022
- National data: <https://sdg-indicators.de/3-1-2>
- Definition: The time series shows the proportion of births attended by skilled health personnel in hospitals.
- Disaggregation: Not available.

2. Comparability with the UN metadata

- Date of UN metadata: March 2025
- UN metadata: <https://unstats.un.org/sdgs/metadata/files/Metadata-03-01-02.pdf>
- The time series is partly compliant with the UN metadata. It only includes child deliveries in hospitals. Births outside hospitals are not recorded, even if they were attended by medical professionals, such as midwives in the case of home births.

3. Data description

- The data on child deliveries in hospitals (numerator) is taken from the hospital statistics of the Federal Statistical Office. It records the number of children born alive in hospitals.

The data on live births (denominator) is taken from the birth statistics of the Federal Statistical Office. The distinction between live births and stillbirths is made in accordance with the 'Ordinance on the Implementation of the Civil Status Act' (PStV). According to this, a child is considered to be born alive if, after separation from the womb, either the heart is beating, the umbilical cord is pulsating or natural lung respiration has begun.

4. Access to data source

- Child deliveries in hospitals - GBE:
<https://www.gbe-bund.de/gbe10/i?i=480:55582E>

5. Metadata on source data

- Quality Report – Basic data of the hospitals (only available in German):
<https://www.destatis.de/DE/Methoden/Qualitaet/Qualitaetsberichte/Gesundheit/gruenddaten-krankenhaeuser.pdf>

6. Timeliness and frequency

- Timeliness: t + 9 months

- Frequency: Annual

7. Calculation method

- Unit of measurement: Percentage
- Calculation:

$$\text{Births attended by skilled health personnel} = \frac{\text{Hospital live births [number]}}{\text{Total live births [number]}} \cdot 100 [\%]$$
