SDG Goal 8	Decent work and economic growth
SDG Target 8.10	Strengthen the capacity of domestic financial institutions to encourage and expand access to banking, insurance and financial services for all
SDG Indicator 8.10.2	Proportion of adults (15 years and older) with an account at a bank or other financial institution or with a mobile-money-service provider
Time series	Accounts at payment service providers

1. General information on the time series

- Date of national metadata: October 10, 2024
- National data: https://sdg-indicators.de/8-10-2
- Definition: The time series shows the number of accounts holding deposits repayable on demand at all institutions offering payment services to non-payment service providers (non-PSPs) at the end of the year. It includes transferable and non-transferable deposits, as well as deposits in the form of card-based e-money.

  Deposits repayable on demand are deposits that can be converted into cash or transferred by cheque, bank transfer, direct debit or similar means at any time and without significant delay, restriction or penalty. These include current accounts, overnight deposit accounts and accounts with a one-day notice period (including deposits made on non-business days that are due or can be withdrawn on the following business day).

  Transferable overnight deposits comprise exclusively accounts with deposits that can be transferred at any time – that is, on demand and without any significant delay, restriction or contractual penalty – by cheque, bank transfer, direct debit or similar means. These accounts often also offer an overdraft facility.

  Internet- and PC-based instant-access current accounts are accounts held with non-payment service providers that can be accessed electronically via the internet, online banking applications, telecommunications lines (e.g. mobile devices) or comparable access channels, such as specialised software programmes. Access is provided directly via electronic channels and without manual intervention by the account-holding institution. This also includes accounts that can be accessed via telephone banking, provided that access is also possible via the aforementioned electronic channels.

  The use of these access methods often requires a corresponding amendment to the contractual agreements between the account holder and the account-holding institution. Furthermore, the institution may provide the account holder with electronic identification features such as a PIN, TAN or devices for generating access codes.

- Disaggregation: Type of account

2. Comparability with the UN metadata
   - Date of UN metadata: March 2026
   - UN metadata: https://unstats.un.org/sdgs/metadata/files/Metadata-08-10-02.pdf
   - The time series is not compliant with the UN metadata, but provides additional information. Whilst the metadata refers to the proportion of adults aged 15 and over who hold an account, the time series shows the total number of demand deposit accounts.

3. Data description
   - The data is taken from the Deutsche Bundesbank's payments statistics. The collection of payment statistics focuses on payments made by non-payment service providers in their capacity as customers of national payment service providers (Payment Service Provider, PSP). The corresponding reports are used to analyse payment behaviour and the financial structure of Germany and also represent an important source of data for the development, management and supervision of payment and securities settlement systems.

     Since the 2007 reporting year, payment statistics have been harmonised within the European Monetary Union. In Germany, data is collected through a comprehensive survey of all monetary financial institutions (MFIs), with the exception of money market funds.

     Since the 2014 reference period, the group of reporting entities has been extended to include payment institutions. The statistics therefore now cover all national payment service providers, i.e. MFIs and payment institutions. Money market funds remain exempt from the reporting requirement. In addition, new reporting items have been introduced and the geographical breakdown has been expanded. Due to methodological differences regarding the content of the reports, the results from the 2014 reporting year onwards are only comparable to those of previous years to a limited extent.

     From 2022, accounts with a zero balance or negative balance are no longer included. For this reason, the results from 2022 onwards are only comparable with previous years to a limited extent.

4. Access to data source
   - Payments statistics: Table 1 – Institutions offering payment services to non-PSPs: https://www.bundesbank.de/en/statistics/banks-and-other-financial-corporations/payments-statistics/statistics-on-payments-and-securities-trading-810330
   - Bundesbank – Number of transferable overnight deposits https://statistiken.bundesbank.de/statistiken-en/timeseries/BBZVSSSI/H.120B_L23

5. Metadata on source data
   - General guidelines on payment statistics: https://www.bundesbank.de/en/statistics/banks-and-other-financial-corporations/payments-statistics

6. Timeliness and frequency
   - Timeliness: t + 9 months

- Frequency: Annual

7. Calculation method
   - Unit of measurement: Number in 1,000
   - Calculation: Not applicable.
