SDG Goal 14	Life below water
SDG Target 14.4	By 2020, effectively regulate harvesting and end overfishing, illegal, unreported and unregulated fishing and destructive fishing practices and implement science-based management plans, in order to restore fish stocks in the shortest time feasible, at least to levels that can produce maximum sustainable yield as determined by their biological characteristics
SDG Indicator 14.4.1	Proportion of fish stocks within biologically sustainable levels
Time series	Sustainably managed fish stocks

1. General information on the time series
   - Date of national metadata: July 6, 2023
   - National data: https://sdg-indicators.de/14-4-1
   - Definition: This time series shows the proportion of fish stocks classified as sustainably managed according to the Maximum Sustainable Yield (MSY) approach out of all stocks studied in the North Sea and the Baltic Sea.

     The MSY (Maximum Sustainable Yield) approach is a long-term concept in which catch quotas are set in such a way that fish stocks can recover and their management is ensured under sustainable economic, environmental and social conditions.
   - Disaggregation: Sea
2. Comparability with the UN metadata
   - Date of UN metadata: March 2024
   - UN metadata: https://unstats.un.org/sdgs/metadata/files/Metadata-14-04-01.pdf
   - The time series is compliant with the UN metadata.
3. Data description
   - The data is taken from the report by the European Union's Scientific, Technical and Economic Committee for Fisheries (STECF), which in turn draws on data from the International Council for the Exploration of the Sea (ICES). Only fish stocks in the North Sea and the Baltic Sea are taken into account.
4. Access to data source
   - STECF report "Monitoring the performance of the Common Fisheries Policy": Table 4 – Number of stocks by ecoregion for which fishing mortality (F) did not exceed F_{MSY} (NEAI2).
     https://stecf.ec.europa.eu/final-reports/cfp-monitoring_en
5. Metadata on source data
   - STECF report "Monitoring the performance of the Common Fisheries Policy":
     https://stecf.ec.europa.eu/final-reports/cfp-monitoring_en

6. Timeliness and frequency
   - Timeliness: Not available.
   - Frequency: Annual
7. Calculation method
   - Unit of measurement: Percentage
   - Calculation: Not applicable.
