

SDG Goal 3

Good health and well-being

SDG Target 3.1

By 2030, reduce the global maternal mortality ratio to less than 70 per 100,000 live births

SDG Indicator 3.1.2

Proportion of births attended by skilled health personnel

Time series

Births attended by skilled health personnel

1. General information on the time series

- Date of national metadata: April 20, 2026
- National data: <https://sdg-indicators.de/3-1-2>
- Definition: The time series shows the proportion of live births in hospitals out of all live births.
- Disaggregation: Not available.

2. Comparability with the UN metadata

- Date of UN metadata: March 2025
- UN metadata: <https://unstats.un.org/sdgs/metadata/files/Metadata-03-01-02.pdf>
- The time series is partly compliant with the UN metadata. It covers only births in hospitals. Births outside hospitals are not included, even if they were attended by medical professionals, such as midwives in the case of home births.

3. Data description

- The data on the number of live births in hospitals is taken from hospital statistics (basic hospital data), whilst the data on the total number of live births is taken from birth statistics. Both sets of statistics are compiled by the Federal Statistical Office.

4. Access to data source

- Live births in hospitals - GBE – Table: Children born in hospitals, e.g. by region [Selections: Live/still birth: live births]:
<https://www.gbe-bund.de>
- Live births total - GENESIS online 12612-0001:
<https://www-genesis.destatis.de/datenbank/online/statistic/12612/table/12612-0001/table-toolbar>

5. Metadata on source data

- Quality Report - Basic data of the hospitals (only available in German)
<https://www.destatis.de/DE/Methoden/Qualitaet/Qualitaetsberichte/Gesundheit/gruenddaten-krankenhaeuser.pdf>
- Quality Report - Birth statistics (only available in German)
<https://www.destatis.de/DE/Methoden/Qualitaet/Qualitaetsberichte/Bevoelkerung/geburten.html>

6. Timeliness and frequency

- Timeliness: t + 9 months
- Frequency: Annual

7. Calculation method

- Unit of measurement: Percentage
- Calculation:

$$\text{Births attended by skilled health personnel} = \frac{\text{Live births in hospitals [number]}}{\text{Live births total [number]}} \cdot 100 [\%]$$
