

SDG Goal 2

Zero hunger

SDG Target 2.3

By 2030, double the agricultural productivity and incomes of small-scale food producers, in particular women, indigenous peoples, family farmers, pastoralists and fishers, including through secure and equal access to land, other productive resources and inputs, knowledge, financial services, markets and opportunities for value addition and non-farm employment

SDG Indicator 2.3.2

Average income of small-scale food producers, by sex and indigenous status

Time series

Average income in small-scale and part-time farms

1. General information on the time series

- Date of national metadata: April 22, 2026
- National data: <https://sdg-indicators.de/2-3-2>
- Definition: The time series shows the average income of small-scale and part-time agricultural operations. In addition to agricultural income, the income statement also includes revenue from farm-related activities—such as farm stands, distilleries, biogas production, contract work, tourism, and landscape conservation—that are operated as agricultural sideline businesses.
Since the proportion of unpaid labor on farms varies widely, income is defined as profit plus personnel costs per worker.
- Disaggregation: Not available.

2. Comparability with the UN metadata

- Date of UN metadata: July 2024
- UN-Metadaten: <https://unstats.un.org/sdgs/metadata/files/Metadata-02-03-02.pdf>
- The time series is compliant with UN metadata but contains the following deviations:
The time series is limited to agricultural holdings and therefore does not include forestry or fishing enterprises.
The time series includes profits from secondary activities not directly related to food production.
The time series refers to small-scale and part-time farms, defined as agricultural holdings with fewer than one worker or as holdings with a size of less than 50,000 standard outputs (gross market output in monetary terms). In the UN metadata, the enterprises to be included are defined as those whose land area, livestock, or turnover falls within the bottom two quintiles.

3. Data description

- The data is taken from the report “The Economic Situation of Agricultural Holdings” published by the Federal Ministry of Agriculture, Food, and Regional Identity. This report compiles and analyzes the accounting data from agricultural test farms. The BMLEH test farm network comprises 1,101 agricultural farms that can be classified as “small-scale and part-time farms” (as of 2023/2024).
The data refer to a single fiscal year (July 1 to June 30).

4. Access to data source

- Accounting Results of the Test Farms: Agriculture - 2) Small-Scale and Part-Time Farms (only available in German):
<https://www.bmel-statistik.de/landwirtschaft/testbetriebsnetz/testbetriebsnetz-landwirtschaft-buchfuehrungsergebnisse/archiv-buchfuehrungsergebnisse-landwirtschaft/buchfuehrungsergebnisse-landwirtschaft-2023/24>

5. Metadata on source data

- Brochure: "The Economic Situation of Agricultural Businesses":
<https://www.bmel-statistik.de/landwirtschaft/testbetriebsnetz/testbetriebsnetz-landwirtschaft-buchfuehrungsergebnisse/archiv-buchfuehrungsergebnisse-landwirtschaft/buchfuehrungsergebnisse-landwirtschaft-2023/24>

6. Timeliness and frequency

- Timeliness: t + 10 months
- Frequency: Annual

7. Calculation method

- Unit of measurement: EUR
- Calculation: Not applicable.
