| SDG Goal 11 | Sustainable cities and communities |
| SDG Target 11.5 | By 2030, significantly reduce the number of deaths and the number of people affected and substantially decrease the direct economic losses relative to global gross domestic product caused by disasters, including water-related disasters, with a focus on protecting the poor and people in vulnerable situations |
| SDG Indicator 11.5.1 | Number of deaths, missing persons and directly affected persons attributed to disasters per 100,000 population |
| Time series | Mortality attributed to exposure to forces of nature |

1. General information on the time series
   - Date of national metadata: December 6, 2024
   - National data: https://sdg-indicators.de/11-5-1
   - Definition: The time series shows the number of deaths attributed to natural forces per 100,000 inhabitants.

     Classification is based on ICD-10 codes. ICD-10 is the 10th Revision of the International Statistical Classification of Diseases and Related Health Problems. In its German Modification (ICD-10-GM), it serves as the official classification system for coding diagnoses in outpatient and inpatient care in Germany.

     The following ICD-10 codes are included:
     X30: Exposure to excessive natural heat
     X31: Exposure to excessive natural cold
     X32: Exposure to sunlight
     X33: Victim of lightning
     X34: Victim of earthquake
     X35: Victim of volcanic eruption
     X36: Victim of avalanche, landslide and other earth movements
     X37: Victim of cataclysmic storm
     X38: Victim of flood
     X39: Exposure to other and unspecified forces of nature

   - Disaggregation: Cause of death
2. Comparability with the UN metadata
   - Date of UN metadata: December 2024
   - UN metadata: https://unstats.un.org/sdgs/metadata/files/Metadata-11-05-01.pdf
   - The time series is compliant with the UN metadata.
3. Data description
   - The data are taken from the Federal Statistical Office's statistics on causes of death, which are based on the analysis of official death certificates. The data are collected in

accordance with the uniform standards laid down by the World Health Organization (WHO) in the ICD-10. As the most important and comprehensive source of data, it provides detailed information on mortality trends in Germany.

During the post-mortem examination, medical doctors record the causes of death on the death certificate. Multiple diagnoses may be listed, which helps to pinpoint the underlying cause of death. On the basis of this information, the so-called underlying condition is determined in accordance with WHO guidelines; that is, the disease or injury considered to be the cause of death.

Mortality resulting from exposure to natural forces may be underestimated if this exposure is not recorded as the underlying condition and thus not as the underlying cause of death.

4. Access to data source
   - GBE – Table: Deaths, Mortality figures [Selections: Hierarchy: ICD-10 V01-Y98 (3-Steller); ICD10: X30, ..., X39]: https://www.gbe-bund.de/gbe/isgbe.fundstellen?p_uid=gast&p_aid=99629820&p_sprache=E&p_thema_id=3900&p_action=TRT

5. Metadata on source data
   - Quality Report: Causes of death statistics (only available in German): https://www.destatis.de/DE/Methoden/Qualitaet/Qualitaetsberichte/Gesundheit/todesursachen.pdf

6. Timeliness and frequency
   - Timeliness: t + 8.5 months
   - Frequency: Annual

7. Calculation method
   - Unit of measurement: Per 100,000 inhabitants
   - Calculation: Not applicable.
